CHRISTOPHER G. PRENER, PH.D.

FINAL PROJECT

VERSION: JANUARY 31, 2018

SOC 4650 & SOC 5650: INTRODUCTION TO GIS

SPRING, 2018
SAINT LOUIS UNIVERSITY

Contents

Project Overview

This guide contains instructions for completing the final project for
SOC 4650/5650: INTRODUCTION TO GIS, which requires students to
clean and map non-emergency call data from the City of St. Louis.
These data describe the presence of various types of problems in City
neighborhoods. The project brings together many of the scientific
computing and GI science skills that are developed over the course
of the semester. It also models the collaborative nature of GI science
work by asking students to complete some aspects of the final project
as a group using the collaborative development (GitHub) and com-
munication (Slack) tools we have learned this semester. This process
and project mirrors the steps taken to author a geospatial conference
poster presentation (for all students) and a geospatial journal article
(for students enrolled in SOC 5650).

Ecometrics and Big Data

Among sociologists and urban researchers, there has been a recent
desire to produce quantitative metrics that assist in assessing the
social characteristics of neighborhoods. This effort, termed "eco-
metrics", initially relied on the development of systematic quantita-
tive measures derived from neighborhood surveys and observation
(Sampson and Raudenbush 1999). The goal of ecometrics, like econo-
metrics[1] and psychometrics[2], has been to produce generalizeable
techniques that are not specific to a single neighborhood or city, but
rather can be used to measure and compare social processes in vari-
ous cities.

   The logic of these instruments has been extended, however, to
also encompass novel administrative data sources produced by cities
themselves. Unlike earlier ecometric instruments, measures derived
from administrative data can be obtained for little to no cost and
carried out over long time periods (O'Brien, Sampson, and Win-
ship 2015). While "big data" may be faddish and even subject to
notable failures (Lazer et al. 2014), large datasets of data produced by

[1] The statistical field of economics that seeks to model economic theory.

[2] The statistical field of psychology that seeks to measure psychological health and mental illness.

cities may offer us the opportunity measure the health or disorder of neighborhoods in new ways.

The Citizens' Service Bureau

Following O'Brien and colleagues (2015), we will use non-emergency call data collected through a "3-1-1" system (the three digit phone number sometimes used for these services) for the final project. The Citizens' Service Bureau (CSB) is St. Louis's version of the 3-1-1 system. They describe their purpose in city government as being "to effectively and efficiently register and route city service requests, answer citizen requests for information, and provide City departments with statistics as needed." These types of requests cover a variety of non-emergent issues - everything from potholes to graffiti to traffic lights that need new bulbs. Our goal with these data is to map the extent of particular types of urban issues that may signal the "health" of neighborhoods within the City.

Final Project Progression

Producing the final project deliverable(s) requires a number of distinct steps that mirror the workflow we have introduced this semester for conducting spatial research. You will need to clean and project tabular data related to the CSB call category of your choice, clean and project demographic data about St. Louis, and produce a number of reference and thematic maps that describe your topic. To produce those maps, you will also need to obtain and clean spatial data that covers the St. Louis area. Instructions for each of these aspects of the project are included in subsequent sections of this document.

Work Groups

All students will be assigned a work group after the initial memos are submitted. We will try to place students in work groups who are working on similar topic areas. Each work group will be responsible for collectively creating the geodatabase and initial set of maps that group members will need for their final projects. The instructions in this document will detail which aspects of the project are to be completed by the group and which aspects each individual student is expected to complete.

Each work group will be assigned a GitHub repository and a Slack channel. Groups are expected to track their progress using the

GitHub Project associated with their work group repo. Work will be uploaded to individual branches within your group repository and then merged through pull requests, with group members providing "peer review" of each others' work before accepting pull requests. They should also utilize Slack for communication, and can also reach out to both Chris and Kyle from their work group Slack channel.

Students will be asked to submit "peer reviews" of each others' contributions to the group at the end of the semester. However, if there are issues with group members failing to complete work in a timely fashion, they should be brought to Chris immediately. Failure to participate fully in the work group will be reflected in students' participation and final project grades.

Waypoints

The final project instructions include "waypoints" - designated check-in times for students to ensure that everyone continues to make consistent forward progress throughout the semester. Waypoints for the Spring, 2018 edition of the course are as follows:

1. **Lecture-03 (February 5th)** - Topic memo submitted as a GitHub issue in each student's assignment repository (see page 19 for details).

2. **Lecture-05 (February 19th)** - Meeting report posted in each group's Slack channel. A designated reported should summarize the meeting and include details on who has been assigned what tasks

3. **Lecture-07 (March 5th)** - Progress report from each student due in group's Slack channel. Each student should provide details of what work they have accomplished so far and what tasks still remain.

   (a) **SOC 5650 Only** - An annotated bibliography with twenty to twenty-five scholarly, peer-reviewed sources is due at this waypoint.

4. **Lecture-11 (April 2th)** - Draft materials due in each student's assignment repository. You are expected to have made *substantial* progress at this point - the overall layout and design of the poster should be established and a portion of the maps should be made and included on the poster. This will only be graded for completion - students who do not submit poster drafts or whose poster drafts show minimal progress will receive a deduction applied to their final project grade.

(a) **SOC 5650 Only** - An draft paper showing *substantial* progress on the Introduction, Literature Review, and Data and Methods sections is due at this waypoint.

5. **Lecture-13 (April 16th)** - Response to reviewer due as a GitHub issue in each student's assignment repository. Each student should open a new issue and respond to Chris's feedback with a plan for how to address each substantive point.

6. **Lecture-15 (April 30th)** - Progress report from each student due as a GitHub issue in each student's assignment repository. Each student should provide a progress report on each of the substantive points detailed in the response to reviewer.

Updates

This guide will be updated after memos are submitted with additional details about how to complete the final project. Please check the Final Project page on the course website for updates and additional information - it will continue to be updated with information, tips, and guidance as the project progresses.

How the Citizens' Service Bureau Works

The CSB is a clearing house for the City. Requests for service come primarily from residents or business owners in the City through the CSB's website or by phone. Other City agencies also put requests for service into the CSB, and they take requests via fax, email, and Twitter.

The following pages walk through what a CSB submission via the City CSB website entails. It is an example of semi-structured data collection. Where possible, fields with a limited number of options are used to limit the types of data or information can be entered. However, there are a number of places where unstructured information can be entered as well. The form fields that appear are flexible. For different problem types, different questions are asked.

The CSB also uses this form to help users identify whether the CSB will actually be able to assist them. For example, they warn submitting residents that graffiti above the second story or on particular types of construction materials cannot be cleaned by the City.

Note how the CSB makes use of spatial data as part of the data collection process. When an address is entered and successfully located, the next page returns parcel and address level information from City datasets overlaid on the Google Maps basemap. This allows submitters to verify that they are correctly locating the problem that they wish to report.

Once the report is addressed, it is marked as "Closed" in the CSB database and its resolution is updated on the CSB's website. Residents who provided their contact information
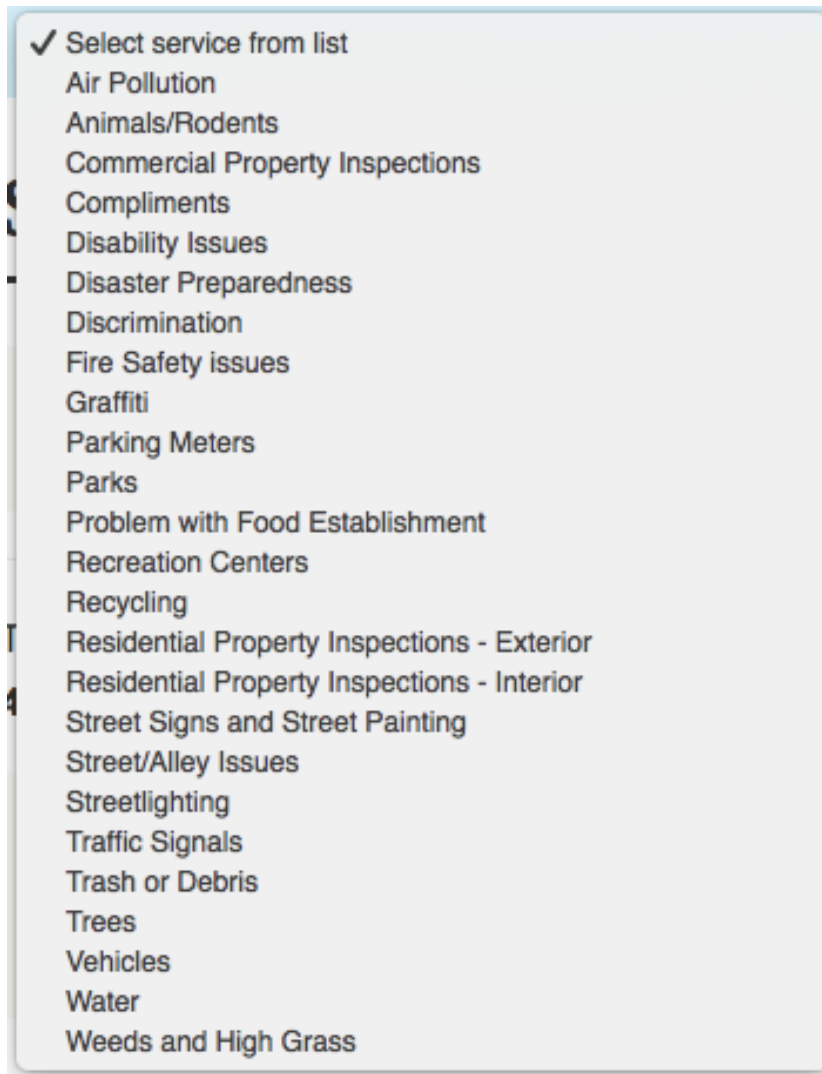

Figure 1: This is the front page of a flier produced by the Citizens' Service Bureau that describes situations the CSB can help residents handle.

✓ Select service from list
Air Pollution
Animals/Rodents
Commercial Property Inspections
Compliments
Disability Issues
Disaster Preparedness
Discrimination
Fire Safety issues
Graffiti
Parking Meters
Parks
Problem with Food Establishment
Recreation Centers
Recycling
Residential Property Inspections - Exterior
Residential Property Inspections - Interior
Street Signs and Street Painting
Street/Alley Issues
Streetlighting
Traffic Signals
Trash or Debris
Trees
Vehicles
Water
Weeds and High Grass

Figure 2: This is the main list of problems that someone submitting a request to the CSB via their website can select from.

Step 1 of 6: Select The Problem

- Graffiti
    - [Trash container is damaged/has graffiti](#)
    - [Graffiti on park equipment](#)
    - [Graffiti on private property](#)
    - [Graffiti on private/commercial trash dumpster](#)
    - [Graffiti on public property](#)
    - [Inspect city tree (tree between street and sidewalk)](#)
    - [Graffiti on a traffic sign/device](#)

Figure 3: For many problem types, users are offered a list of possible subtypes that help the CSB further narrow which City agency will ultimately be responsible for addressing the concern.

Step 2 of 6: Where is the request needed?

By Address

Street Address:

3143 KEOKUK ST

Search

E.g. 1520 Market

By Intersection

Street 1:

- Select street from list-

Street 2:

- Select street from list -

Search

Figure 4: Users can submit requests either by street address or by an intersection.

Step 2 of 6: Confirm the location

You have selected the following location: **3143 KEOKUK ST**
Is This Location Correct?

☑ Yes, continue to step 3

← No, try a new address

Figure 5: Note how spatial data are overlaid on the Google Maps basemap. These data include parcel boundaries and street address numbers.

Step 3 of 6: Answer detailed questions about your request

Question 1: How high up is the graffiti?

Note: City cannot remove graffiti higher than the 2nd story. For these cases, the owner is resposible for removing the graffiti. You may instead submit a request for a building inspection

Change to: Inspect for exterior building code violations

◉ Ground level

○ 2nd story

Continue

Figure 6: The CSB uses a number of screens to obtain more detailed information about the request and to give users information that may impact how their request is processed. This screen captures the height of the graffiti off the ground.

Step 3 of 6: Answer detailed questions about your request

Question 2: Location of graffiti

○ On building-rear
○ On building-front
◉ On building-side
○ Garage
○ Other - see details

Continue

Figure 7: The second screen for the graffiti request. This screen captures the location of the graffiti on the building.

Step 3 of 6: Answer detailed questions about your request

Note: City does not remove graffiti from fiberglass doors or wooden fences. For these cases, the owner is resposible for removing the graffiti. You may instead submit a request for a building inspection

Question 3: Type of surface
- ⦿ Unpainted Brick
- ◯ Painted Brick
- ◯ Unpainted Concrete
- ◯ Painted Concrete
- ◯ Unpainted Metal
- ◯ Painted Metal
- ◯ Other - see details

Continue

Figure 8: The third screen for the graffiti request. This screen captures the construction material that the graffiti has been pained on, which can impact how the graffiti is removed.

Step 3 of 6: Answer detailed questions about your request

Question 4: What color is the graffiti?

not to exceed 450 characters

Blue and white

Continue

Figure 9: The fourth screen for the graffiti request. This screen captures details on what the color of the graffiti is.

Step 3 of 6: Answer detailed questions about your request

Question 5: Is the property vacant or occupied?
- ◯ Vacant
- ⦿ Occupied
- ◯ Unknown

Continue

Figure 10: The fifth screen for the graffiti request. This screen captures details about the building that has been affected.

Step 3 of 6: Answer detailed questions about your request

Please describe the details regarding your request, such as exact location (front, rear, etc.), description of problem, and any other relevant facts that may help the inspector resolve your issue.

You will have the option to attach a photo to this request in step 5. Even if you plan on providing a photo, it is very important that you provide details below.

Provide Details: (not to exceed 450 characters)

Graffiti is located on the east side of the building in the gangway between this building and 3141 Keokuk Street.

Continue

Figure 11: The sixth screen for the graffiti request. This screen captures details about where the graffiti is on the affected. Note how this is different than FIGURE 6 in terms of the way the data are collected.

Step 4 of 6: Enter your contact information

Please let us know how to contact you in case we need more information to handle your request. (optional)

For Citizens

Continue

Figure 12: This screen captures details about who is submitting the request. Note that it is *optional*.

Step 5 of 6: Upload Supporting Files (Optional)

Please upload any supporting documents that will clarify your request (optional).

Supported document types: PDF, JPG, JPEG, GIF, PNG

Upload 1
Choose File | graffiti.png   Clear this file

+Add a related document

Submit Request

Figure 13: This screen allows users to upload a photo or document that pertains to the request. This is the last step before submitting the request to the CSB and verifying its accuracy.

Check Status of a Service Request

Find out how your service request is progressing

Your search for service request ID **904156**

New Search

Service Request (SR)ID:	904156
Problem Location:	3143 KEOKUK ST
Request Initiated:	10/14/2016
Dept To Receive SR:	Operation Brightside
Problem Type:	Graffiti on private property
Dept Response Due By:	11/03/2016
Status of Request:	Closed
Dept Investigation Completed On:	10/25/2016
Dept Resolution:	graffiti removed

Figure 14: This screen shows the resolution of the request.

The Citizens' Service Bureau Data

The core data for this project cover seven years of Citizens Service
Bureau (CSB), from 2009 through 2015. The data were originally
obtained in February of 2017 from the City of St. Louis's Public
Datasets portal.

St. Louis City's Public Datasets - Terms of Use

All of the data that the City of St. Louis makes public, including the
CSB data, are available under the following license:

Description *The City of St. Louis strives to enhance public access to and use of data that it collects and publishes.
As part of an initiative to improve the accessibility, transparency, and accountability of City government, this catalog
offers access to a repository of government-produced, machine-readable data sets. The datasets are organized by orig-
inating department. The City provides access to the information free of charge subject to the terms of this agreement.
Use of data derived from the datasets, which may appear in formats such as tables and charts, is also subject to these
terms.*

Terms *The City of St. Louis reserves the right at any time to update, modify, or discontinue the release of the datasets.
The City does not warranty the completeness, accuracy, content, or fitness for any particular purpose or use of any
public dataset made available, nor are any such warranties to be implied or inferred with respect to the public datasets
furnished therein. The City shall not be responsible or liable for the accuracy, usefulness or availability of any data in
the datasets.*

Accountability *When working with the datasets, be aware that these files are raw extracts derived from various
data sources. The City of St. Louis is aware that errors exist in these datasets. Contact the originating department if
questions/issues arise.*

Data Access

All data can be found in the file `csbCreate.csv`, which is located in
the `finalProject` repository on GitHub. This repo also contains the
code used to create `csbCreate.csv`. **You do not need to execute this
script. It is provided for reference only. It is legacy Stata code that**

we will not be using this semester. The output the script generated is included. The total size of the initial dataset is quite large - 87.9MB. It contains $n = 786,355$ observations.

Data Definitions

The following are some basic descriptions of what each variable in 'csbCreate.csv' are supposed to measure:[3]

- requestid - CSB assigned identification number for each request

- problemcode - general description of the problem associated with the request

- description - (sometimes) more detailed description of the problem associated with the request

- probaddress - address where problem is located

- probcity - city where address is located

- probzip - zipcode where address is located

- datetimeinit - date request made

- srx - UTM x coordinate for address

- sry - UTM y coordinate for address

- status - status of request

- prjcompletedate - date request completed

- reqyear - year request made[4]

Data Quality

You should be aware that these data contain a number of issues. There are numerous duplicate records, the identification variable does not uniquely identify observations, and the variable names are unnecessarily long. The spatial data are also incomplete - some addresses do not have corresponding x,y coordinates, and some x,y coordinates do not have corresponding addresses. All of these issues will need to be resolved in the data cleaning aspect of the project.

[3] It is worth noting that a number of these variables, including probcity and probzip, do not actually measure what they are supposed to.

[4] This is the only variable that was not included in the original data obtained from the City of St. Louis. Chris created this during the initial dataset construction process to facilitate the removal of cases before January 1, 2009 and after December 31, 2016.

Project Memo

ℹ️ **Submit as a Issue in your GitHub Assignments repo**

Memo Assignment

The first task for the final project is selecting a category or categories of interest. The list below reflects the contents of the `problemcode` variable after you have completed the data cleaning steps. This is provided as a preview of the state of the dataset after the data quality problems have been dealt with. Note that the sample size has dropped from $n = 786,355$ to $n = 721,448$. We want you to select a final project topic based not on the initial data release, but on the sample size of observations you will have after the initial data cleaning is complete.

To complete the final project memo, scan the list below and select a problem code or codes that interest you. Your topic should have a minimum of 500 observations and ideally should have several thousand or more. If you find a topic that interests you that has fewer than the ideal number of observations, try to find a number of related categories so that you can pool those observations.

Your memo should be a Markdown formatted GitHub Issue that provides a general statement about your topic and notes the specific problem code or codes you are interested in using along with the number of observations for each code. This should be submitted in your GitHub Assignments repository.

Problem Code Values for Cleaned Data

```
. tabulate code
